**Frame Center’s Guide to Hanging Frame with Double Z Bars**

### What you need
- pencil
- ruler/measuring tape
- level
- screws (anchors if needed)
- drill
- Z bars (provided)

### Instructions
1. Hold your frame to the wall and mark where you would like the top center to sit.
2. On the back of your frame slide your Z bars under the Z bars already attached to the frame. Measure from the top edge of your frame down to the circular holes on each of your unattached Z bars.
3. Mark these measurements on your wall from the top center point.
4. Center your top Z bar on the wall with the mark you made. Make sure it is level and use a pencil to mark where each hole lines up.
5. Repeat the last step with your bottom Z bar.
6. Use a drill to screw both of your Z bars into the wall (you may need to predrill or use anchors depending on your wall).
7. Slides the Z bars of your frame onto the Z bars attached to the wall and make sure that they are lined up on the sides.
