

Hanging Odd Number of Frames in a Row on Wall Buddies

Mark the center top of where you want the middle frame to sit on the wall.

From the mark you made on the wall measure down the top to center measurement given. Then on either side of that lay out the center to wall buddy measurements.

Use the frame you already mapped out as reference for mapping out the frames on either side. Measure out the desired distance between the frames making sure to add the amount of space between the wall buddies and the edge of the frame.

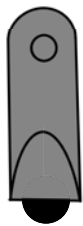

Use the Total Distance between the wall buddies that's given to measure out where the outer hooks should go.

Repeat steps 3 and 4 using the outer frames as reference until you have any additional frames mapped out.

Make sure all your points are level.

Hammer in all your hooks, making sure that the bottom of the hooks sit at the marks you made.

Slide the wall buddies of each frame over the hooks and make sure each frame is secure before letting go.

Share your new frames online and tag us!
